

# [CentOS] Web Server Installation

WebServer(CentOS)  
192.168.10.30/24

```
#dnf install -y install httpd
```

```
#rpm -qi httpd
```

```
#systemctl start httpd
```

```
#systemctl enable httpd
```

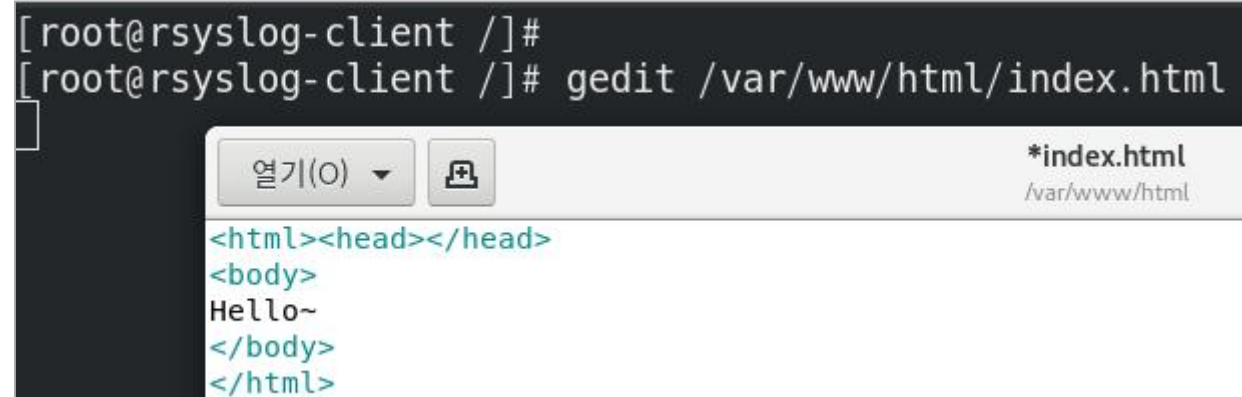

```
#systemctl status
```

WebServer(CentOS)  
192.168.10.30/24

```
#gedit /var/www/html/index.html  
<html><head></head>  
<body>  
Hello~~  
</body>  
</html>
```

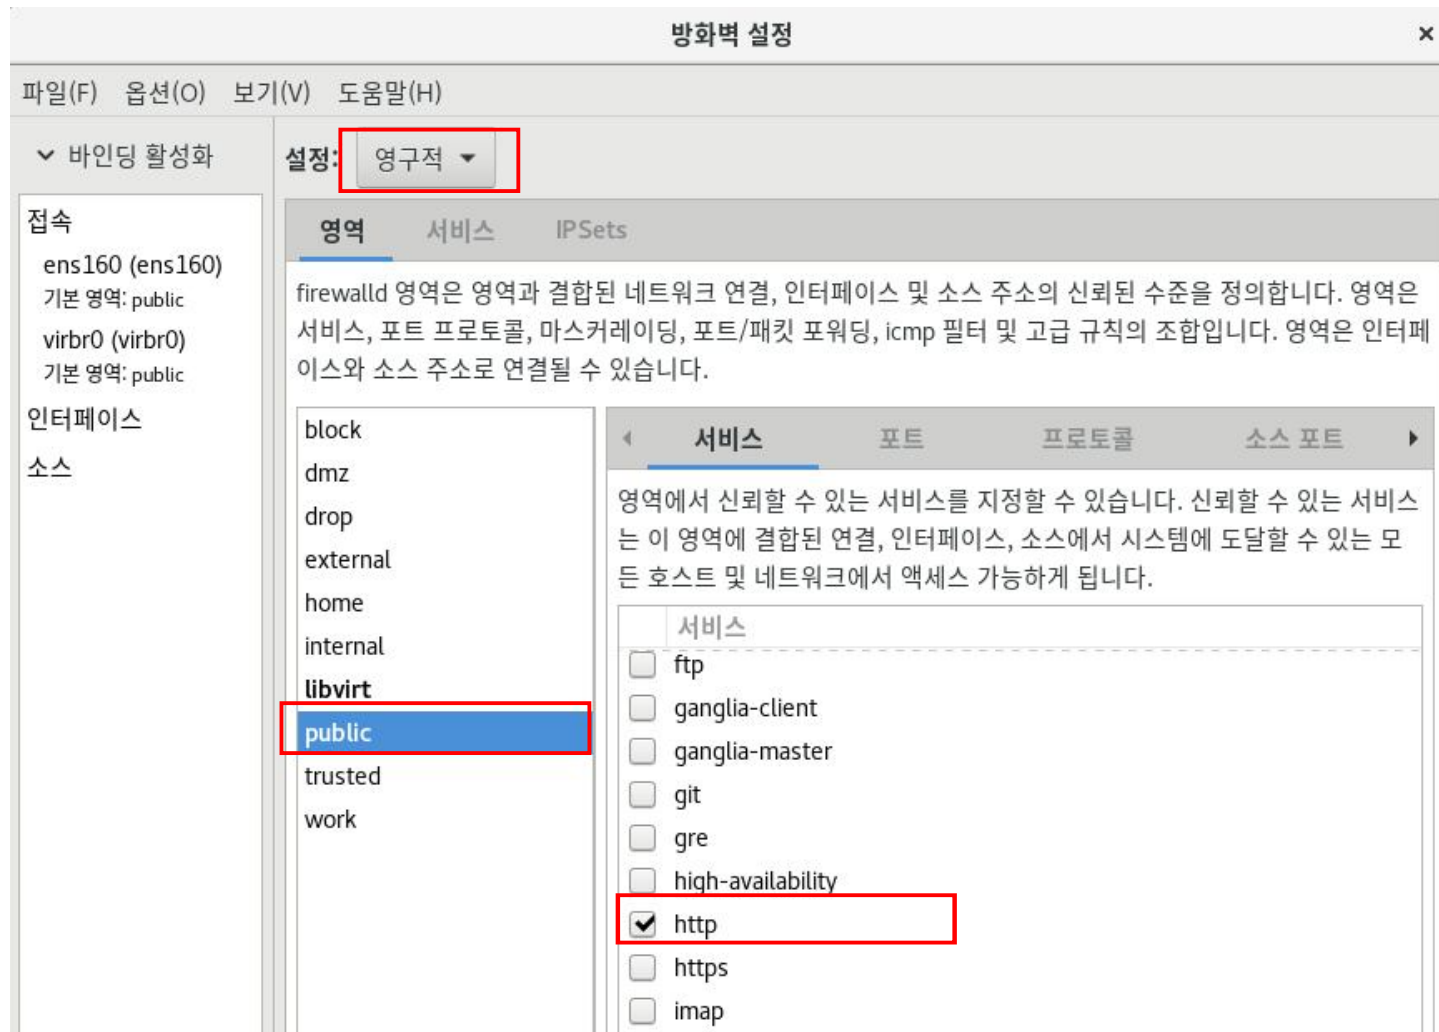

```
[root@rsyslog-client /]#  
[root@rsyslog-client /]# gedit /var/www/html/index.html
```

A screenshot of the gedit text editor interface. The title bar shows the file name as \*index.html and the path as /var/www/html. The editor contains the following HTML code:

```
<html><head></head>  
<body>  
Hello~  
</body>  
</html>
```

# 방화벽 설치 활성화

#firewall-config

## 환경 설정 파일

#cd /etc/httpd/conf

```
[root@rsyslog-client httpd]# ls
conf  conf.d  conf.modules.d  logs  modules  run  state
[root@rsyslog-client httpd]# cd conf
[root@rsyslog-client conf]# ls
httpd.conf  magic
[root@rsyslog-client conf]# gedit httpd.conf
[root@rsyslog-client conf]# pwd
/etc/httpd/conf
[root@rsyslog-client conf]#
```

## 로그 파일

#cd /var/log/httpd

```
[root@rsyslog-client httpd]# pwd
/var/log/httpd
[root@rsyslog-client httpd]# ls -l
